

Waiting For Care:

Long Hospital Waiting Times

THE PROBLEM

Long waiting times can result in:

- Delayed healthcare
- Patient frustration
- Overcrowded waiting areas
- Increased staff workload
- Lower patient satisfaction
- **Delayed treatment in urgent cases**

The WHO notes that waiting times are associate **delays in emergency care can have serious consequences**

139.97 MINUTES
=2 HOURS 20 MINUTES

Average time spent by new patients in the outpatient service of UP-PGH from initial registration through consultation.

AVERAGE WAITING TIME

MAIN CAUSES

High Patient Volume

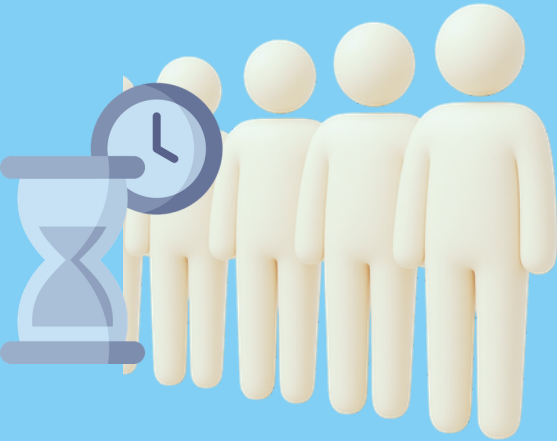

Large numbers of patients can overwhelm available services.

Limited Healthcare Staff

A limited number of healthcare workers can create bottlenecks.

Manual Processes

Paper-based registration and other manual procedures can take additional time.

A **digital queue system** allows patients to register electronically, receive a queue number, monitor their position, and get notifications when their turn is near. This helps **reduce physical waiting, improve patient flow, and make clinic services faster and more organized.**

SOLUTION

“Less waiting, faster care, better patient experience. With technology, healthcare can become more efficient, organized, and patient-centered.”

Every Second Matters
